

Term	Definition	Image
Lens	The clear plastic or glass part of reading and prescription glasses, magnifiers and telescopes that people look through.	
Refractive error	A common problem with vision, which is usually correctable with the right glasses or contact lenses. There are different types of refractive error including: astigmatism, hyperopia, myopia and presbyopia.	
Presbyopia	Presbyopia happens to most people as they age. People with presbyopia find it harder to see things up close. For example, activities such as reading and sewing become harder.
