

Term	Definition	Image
Allergen	A tiny particle, for example pollen, that causes an allergic reaction.	
Discharge	Fluid that comes out of a part of the body. It is often a sign of an infection.	
Foreign body	Unwanted object that is stuck in a body part but should not be there. For example, a grain of sand under the eye lid or an insect in the ear canal.	
Fundus reflex	Eye reflex in which light enters the eye through the black central part of the eye (pupil). The light reflects off the back of the eye (fundus) and returns through the pupil.	
Lubricating eye drops	Eye drops that are used to help keep eyes moist.	
Near vision spectacles	Near vision spectacles work by making text or objects look larger (magnified). They are used for people with near vision problems in older adults. They help the person to carry out any activity that is within arms-reach.	
Presbyopia	A near vision problem in older adults. People with presbyopia have difficulty seeing things that are close. Presbyopia only occurs as people reach the age of 40 years or over.	
Topical antibiotic	Medicine that is applied directly to the skin or eyes to treat bacterial infection.
